PROFESSIONAL SUMMARY

Results-driven SDET with 2 years of experience designing scalable test automation frameworks for web, mobile, and desktop enterprise applications. Proficient in Python, Java, and TypeScript with strong expertise in BDD frameworks and Page Object Model architecture. Experienced in end-to-end test strategy, CI/CD integration, and delivering measurable quality improvements in Agile/Scrum environments. Proven track record with enterprise clients including Schneider Electric and Keysight Technologies.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript
Automation Testing: Selenium WebDriver, Playwright, TestComplete, Appium
Frameworks: BDD (Behave/Cucumber), Page Object Model (POM), Data-Driven Testing
API Testing: REST API Testing, Postman
CI/CD & DevOps: GitHub Actions, Git, GitHub
Databases: SQLite, MySQL
Reporting & Tracking: Allure Report, JIRA
Web Development: Django
Testing Types: Functional, Regression, Smoke, Sanity, Exploratory, Cross-Browser, Automation, Manual
AI-Assisted Development: GitHub Copilot, ChatGPT, Claude AI (Prompt Engineering, Code Generation, Test Script Generation)
OS & Platforms: Windows, Linux, macOS

PROFESSIONAL EXPERIENCE

Moolya Software Testing Pvt Ltd | SDET*Jul 2024 – 2025*

Project: EcoStruxure Process Expert (EPE) — Schneider Electric

Desktop Application | Python, BDD (Behave), TestComplete, Git, JIRA

- Designed and developed automation test scripts for industrial desktop and web applications using Python (Behave BDD) and TestComplete, significantly reducing manual regression effort.
- Architected reusable BDD framework with modular step definitions, POM abstraction, and data-driven capabilities, cutting test authoring time by 30%.
- Translated business requirements into structured test scenarios achieving comprehensive test coverage across multiple sprint cycles.
- Tracked, triaged, and reported defects via JIRA; collaborated with product owners in Agile ceremonies including Sprint Planning, Backlog Grooming, Sprint Review, and Retrospectives.
- Performed smoke, sanity, and regression testing for each release cycle, ensuring stable builds before production deployment.

Project: CRM Web Automation POC — Keysight Technologies

Web Application Automation | Java, Selenium WebDriver, BDD (Cucumber), Maven, Git

- Developed a POC automation suite for a CRM web application covering asset selection, certificate downloads, and service order request workflows.
- Implemented Page Object Model (POM) for scalable, maintainable test architecture; validated key user flows across calibration, repair, and file verification modules.
- Designed and executed data-driven test scenarios; validated regression, boundary, and edge case scenarios enhancing test coverage and reliability.
- Handled dynamic web elements and implemented robust wait strategies to ensure stable test execution across varying network conditions.
- Configured Maven-based project structure with dependency management, enabling seamless build and test execution via command-line integration.

Project: Academia Portal Web Automation POC — Serosoft

Education Management System Automation | TypeScript, Playwright, BDD (Cucumber), Allure Report

- Built a POC automation suite with BDD test cases across multiple modules (Programs & Courses, Admission, Fees & Payments, Examination, Tools) using Playwright with TypeScript.
- Authored Gherkin-style feature files with structured Given/When/Then steps covering end-to-end admin workflows.
- Integrated Allure Reporting to generate stakeholder-ready execution results with detailed pass/fail analytics and screenshots.
- Implemented reusable page objects and utility functions to minimize code duplication and improve framework maintainability.
- Validated critical business flows including student admission, fee collection, exam scheduling, and course management across the portal.

Project: SPINNY — Mobile & Web Application Automation POC

Cross-Platform Automation | TypeScript, Java, Playwright, Appium, Allure Report

- Developed a POC test automation suite for the Spinny automotive marketplace across web and mobile platforms, automating key user journeys including car search, filter/sort, details validation, and sell-car flow.
- Validated responsive UI behavior, touch interactions, form validations, and navigation under different test scenarios across iOS and Android devices.
- Built reusable automation scripts for regression testing, ensuring consistent quality across frequent release cycles.
- Integrated Allure Reporting for execution tracking, failure analysis, and stakeholder-level test result visualization.
- Configured Appium for mobile test execution with device-specific capabilities, handling platform differences between iOS and Android.

PERSONAL PROJECTS

Naukri Resume Auto-Updater*github.com/Gunachanthiran/Naukri-daily*

- Built a Python + Playwright automation script to auto-login, upload the latest resume, and capture verification screenshots, eliminating daily manual effort with reusable dynamic selectors.

LinkedIn Automation & Lead Generation Bot

- Engineered Python + Selenium scripts to send personalized connection requests and scrape profile data; built a BeautifulSoup + Pandas pipeline to export structured lead records to Excel.

EDUCATION

Bachelor of Computer Applications (BCA)2017 – 2020

Thanthai Hans Roever College, Perambalur, Tamil Nadu
